Tips for Site Visits of Localized Drainage Issues

Presenter: Logan Gilbertsen, P.E., CFM with HR Green

Site visits are an important tool to gather information on a drainage problem. Sometimes, we must be “investigators” to determine the source of a problem and identify solutions. Through numerous site visits in his career, Logan has found many tips and tricks to help make a site visit successful. During the presentation, Logan will go over the desktop investigation to do ahead of time, the right question to ask residents, the evidence to look for, as well as other tips to help make your next site visit worth your while.

Logan Gilbertsen is a Project Manager and Group Manager at HR Green with 10+ years’ experience. He specializes in Water Resources and Environmental Engineering. Currently he works with a wide variety of projects ranging from stream bank stabilization and naturalization to the design of storm water Best Management Practices (BMPs) in urban and rural settings. Logan has a passion for improving our natural resources, he participates in Conservation@Home where he and his daughter maintain raingardens and bioswales in their yard.
