

NOVEMBER GENERAL MEMBERSHIP MEETING

GIS AND ASSET MANAGEMENT PRESENTED BY:

- Introduction and GIS/Asset Management Overview – Tim Farrell, P.E., Village of Huntley
- Linking Technology to Municipal Public Works Services – Kevin Wagner, P.E., Ruekert-Mielke
- A VUEWorks Asset Management Demonstration of the Village of Huntley GIS/Asset Management System – Kevin Korth, Ruekert-Mielke

This talk will discuss the catalyst for the Village of Huntley to advance GIS and Asset Management initiatives. A GIS system captures, stores, manipulates, analyzes and presents spatial or geographic data. An Asset Management System links to the GIS system and allows for systematic planning and scheduling of work, organized work efforts, improved customer service, improved communication and project coordination, elimination of duplicated efforts, improved infrastructure data analysis for capital planning efforts, and the overall tracking of critical data for all assets including work performed and the ability to create reports.
